

- Importance: low

The `connect.meta.data` property preserves the following Connect schema metadata when going from Connect schema to Avro schema. The following metadata is added back in when going from Avro schema to Connect schema.

- doc
- version
- parameters
- default value
- name
- type

## Protobuf

Protobuf example converter properties are shown below:

```
key.converter=io.confluent.connect.protobuf.ProtobufConverter
key.converter.schema.registry.url=http://localhost:8081
value.converter=io.confluent.connect.protobuf.ProtobufConverter
value.converter.schema.registry.url=http://localhost:8081
```

## JSON Schema

JSON Schema example converter properties are shown below:
